

1. Shape Maths Pack

If you have requested Maths Pack (2) you will find a variety of Shape activities starting with 2D shape and moving onto 3D objects. Please complete as many activities as you can and some pupils may require some support to complete some of them.

You shouldn't need any materials however it would be great if you should do a shape hunt in your own home. Looking for different 2D shapes – perhaps even on your daily walk, identifying shapes of windows/doors etc. This would also be great for 3D objects – can you find cubes? Cuboids? Maybe even a cone or sphere from different items in and around your home. This will help the learning become more meaningful to the pupils if they can see the shapes are also real-life objects they use every day.

2. Symmetry Activities – online this week you will find a variety of different activities around Symmetry. We started looking at symmetry the last week of school however some children were absent so perhaps haven't looked at this concept for some time. I have attached a PowerPoint to support the learning and different activities which can be completed. One of the activities requires a scissors and glue to cut and stick but if you don't have glue they can just cut the items and place them in the correct column. Again if possible look around the home or when out for your daily walk and identify items which are symmetrical.

3. Finally, I have attached a life skills challenge for the final exercise this week. Many of the pupils were taking part in basic cooking and baking throughout the year. Therefore it would be great if they could use their skills at home. This weeks task is to make a sandwich – I have attached an activity which uses a jam sandwich as an example but any type of sandwich would be great. The more creative the better. Allow your child to look out and find the ingredients, equipment and make the sandwich – filling, bread etc themselves.

Please take photos and send them in if you complete any of the tasks and keep the paper copies of the activities completed. Would be great to see anything else you are up to at home too. I know some of you have chosen your own personal projects to do and lots of baking, gardening and free choice play been going on.

I will be making phone calls weekly or fortnightly basis on a Tuesday between 9.30-12pm. But feel free to contact the school if you have any questions or concerns.

Thank you, stay safe

Looking forward to seeing you all as soon as we can

Mrs Shelley Jack
